

pure access™ + **SCHLAGE**

Pure Access Cloud provides a complete access control platform allowing for full installation, administration and management of our patented Pure IP™ access control hardware. The modern user interface establishes a new standard for ease of use in managing an unlimited number of access points across any geography through a mobile device, tablet or modern browser. Pure Access brings new features and functionality to access control that fully leverage the power of our Pure IP™ hardware solution.

Readily Available

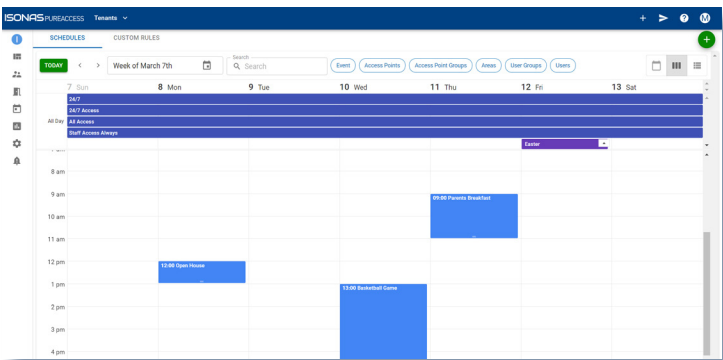

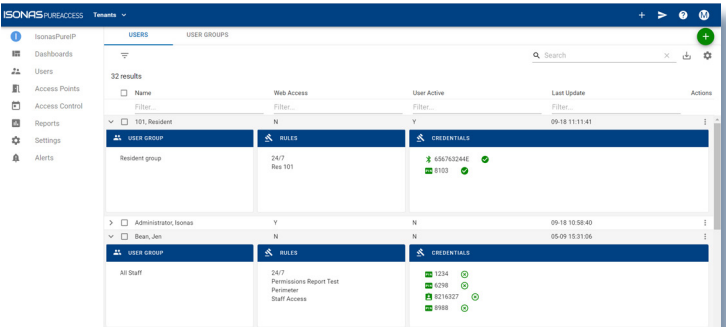

Pure Access Cloud is available anytime from anywhere. All you need is a device (phone, tablet or desktop browser) that can connect to the internet.

Fully Hosted Access Control as a Service Solution (ACaaS)

Access control as a service provides peace of mind, a lower total cost solution that is more secure and accessible than traditional on-premise software deployments.

Customizable Dashboards

Individual dashboard widgets allow you to customize how you monitor your system in real time. The responsive design provides a fully interactive monitoring capability from your mobile device, tablet or modern browser.

Simple and Modern User Interface

The adoption of a material design philosophy has simplified work flows to provide an easy to use system that requires minimal training.

Product Compatibilities:

- Schlage RC Reader Controller
- Schlage NDE Wireless Locks
- Schlage LE Wireless Locks

Why buy Access control as a service and networked devices?

Protect more of your facility for less with complete access control.

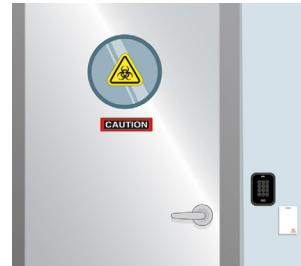

Wired or Wireless – Allegion’s family of brands protect your entire facility with Pure Access Cloud at the head end. Extend access control deeper into the building by adding wireless locks to your system. Increase convenience by providing card or mobile access to interior offices, storage areas and shared spaces. With the combination of the Schlage wireless locks and the all-in-one reader controller, customers can provide enhanced security that leverages their existing network infrastructure and fits their budget.

Facility – low to medium complexity access control

Wireless Solutions for interior doors

Wired Solutions for perimeter doors

Parking Gate Solutions

ACaaS + cloud security = peace of mind

Pure Access Cloud provides secure end to end communication by using industry recognized best practices and encryption schemes to secure our cloud infrastructure as well as securing communication and sensitive information. Pure Access Cloud relies on micro service architecture best practices to provide scalability, redundancy, and high availability across the entire platform.

High availability

- Hosted by Amazon Web Services
- Multiple availability zones for redundancy
- Proactive 24/7/365 monitoring and alerting allow us to identify potential issues and hot spots before you do

Secure

- All sensitive application configuration and user information is encrypted and securely stored within the application infrastructure
- A Secure Development Lifecycle (SDL) is utilized to drive security into the product during development

Compliant

- Certified by internal and external experts
- Third party penetration tests are conducted annually to hold us to the highest security standards

Secure perimeter doors with the new Schlage RC reader controller.

The RC combines Pure IPT™ technology pioneered by ISONAS together with Schlage's intelligent hardware. This cost-effective all-in-one edge device connects direct to the IT network via a single PoE cable.

Leverage mobile credentials to enable security and convenience.

Choosing the right credential technology and type is important for a secure and seamless user experience. Schlage offers both smart credentials and a mobile credential to fit the needs and budget of most every application while maintaining the highest level of security.

It's easy to add more doors to your system with Schlage mobile enabled wireless locks.

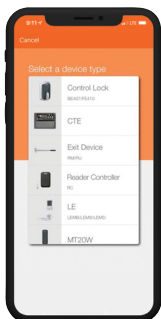

Schlage NDE and LE wireless locks simplify installation by combining the lock, reader, and sensors into one battery-powered unit. Schlage wireless locks are designed to connect to Pure Access Cloud over built-in Wi-Fi and receive periodic updates throughout the day. A wide variety of lever styles and finishes are available to suite across the facility.

NDE cylindrical wireless locks LE mortise wireless locks

Note: Pure Access supports Storeroom function; Privacy, Office and Apartment functions are not currently supported

Commission Schlage devices using the ENGAGE™ mobile app:
